

Your data isn't as safe as you think.

From hardware failure to fire, flooding or other natural disasters – what would happen to your data if the unthinkable occurred? Data is one of your most critical business assets, and protecting it is paramount to any business continuity plan. Unfortunately, many small businesses rely on vulnerable tape backup systems, creating a false sense of security.

Exchange your false sense of security for the real security of ReCover i.t.® by Design Data.

ReCover i.t.® gives your business complete data security by:

- Using the latest in secure cloud storage technology to move data off-site
- Monitoring and verification of all backups to ensure proper function
- Creating a disaster recovery image, which allows systems to be fully restored on new hardware in the event your existing hardware fails
- Archiving all incoming and outgoing email into a searchable database to meet corporate and legal data retention requirements

Protecting your critical data in the event of a disaster.

ReCover i.t.® offers a complete package of backup solutions for your business.

- + Image Software**
Complete imaging software, including upgrades, maintenance and support.
- + Job Notification and Alerting**
Backup notifications and alerts are triggered if certain parameters are not met.
- + Cloud Storage**
Your encrypted server image is stored in the cloud for a complete offsite copy of your server.
- + Local Storage**
Design Data provides an onsite device for faster data recovery and restoration.
- + Instant Restore Device**
Your encrypted data is stored with Design Data for fast, reliable image recovery in the event of a disaster.
- + Weekly Data Verification**
Design Data manually verifies the functionality and accessibility of your images.
- + Disaster Restoration Services**
We will provide complete restoration of your data to get your business back up and fully functioning.
- + Backup Server on Standby**
A pre-configured backup server is ready to restore your image at a moment's notice.
- + Onsite Server Appliance**
An appliance residing at your location can boot your image quickly with minimum downtime

Design Data is a Certified Business Continuity Vendor.

Design Data has been certified by the international authority on disaster recovery. We will make sure your data backup strategies are fully aligned with your business continuity plan's recovery time and recovery point objectives.

If your business does not have a business continuity plan, Design Data can help. Together with Trout, Ebersole & Groff, CPA and Paul Davis Restoration, we can provide a complete business continuity planning solution, including risk assessment, plan development, IT disaster recovery, physical site restoration and total business continuity funding.
